

**IN THE SPECIFICATION:**

On page 9, after line 15 add the following paragraph.

As shown in Figures 3 and 5-7 the laminate has an outer surface at its carrier layer 7 which over substantially its entire area is a smooth continuous contour which is illustrated as flat (Figure 3) or a curved contour (Figures 5-7). Figures 6-7 illustrate the outwardly extending rib or bead to form a minor interruption to the contour. Figure 7 illustrates the layers to include outwardly extending end walls.

On page 13 after line 11 add the following paragraph.

As illustrated in Figures 8-11 and particularly in Figure 9, the aligned holes 32 in each layer form a passageway having a straight continuous longitudinal axis. The passageway is shown to be of uniform diameter throughout its length. As illustrated each hole in layer 16 is aligned with a hole in layer 14.
